Module User Interaction

Access Levels-:

Access Level	Description
Full Access	Can create, read, update, delete, and configure module settings (e.g., templates, rules).
Create & Edit	Can add new records and modify existing ones within their scope.
Read-Only	Can view data but cannot make any changes.
Limited Action	Interacts with the module in a specific, limited way (e.g., receives a notification, benefits from a workflow action). Like if they want to fetch some data they can from MDP.
No Access	Has no direct interaction with or visibility into the module.

User Role/ Module	Doc Upload	Master Data	Finance	Auto Comm	Data Fetch/Fill	Doc Gen	Dashboard	Workflow/ Task	KB & AI	Security	Ext. Integration
1. Client	Create & Edit	No Access	Read-Only	Limited Action	No Access	Limited Action	Read-Only	Read-Only	Read-Only	No Access	No Access
2. Sales & Onboarding	Create & Edit	Create & Edit	Read-Only	Create & Edit	Limited Action	Create & Edit	Read-Only	Create & Edit	Read-Only	No Access	Limited Action
3. Compliance Manager	Create & Edit	Create & Edit	Read-Only	Create & Edit	Limited Action	Create & Edit	Read-Only	Create & Edit	Create & Edit	Limited Action	No Access
4. Compliance Operation	Create & Edit	Read-Only	No Access	Limited Action	Limited Action	Create & Edit	Read-Only	Create & Edit	Read-Only	No Access	No Access

In-Depth Analysis: Process Flows & Bottlenecks

Here is the detailed breakdown of the three core workflows, including a step-by-step description of user actions and module interactions, along with potential bottlenecks and dependencies for each.

Module 1- Document Upload Module
Module 2- Master Data Management Module
Module 3- Finance Module
Module 4- Auto communication Module (Triggered based)
Module 5- Auto Data Fetch and Fill Module.
Module 6- Template based Document Generation Module
Module 7- Dashboard Module
Module 8- Workflow and Task Management Module
Module 9- Knowledge Base and AI Module
Module 10- Security Management Module
Module 11- External System Integration Module

1. Lead-to-Client Onboarding Flow

This flow is designed to be a highly structured process that ensures a smooth and professional handover from the Sales team to the ongoing client management team.

Detailed Step-by-Step Description:

Step	User Action	Description	Primary Modules
1	**Sales Team**	A new lead is identified and entered into the system.	Master Data
2	**Sales Team**	Manages the lead through the sales pipeline using their dashboard. Triggers automated follow-up sequences.	Dashboard, Auto Comm
3	**Sales Team**	Generates a formal proposal and contract for the client.	Doc Gen
4	**Finance Team**	Once the client agrees, an invoice is raised. Finance receives the payment and updates the status to "Paid" in the system.	Finance
5	**System (Gated)**	The "Paid" status acts as a trigger, automatically creating a "Complete Handover" task for the Salesperson.	Workflow/Task
6	**Sales Team**	Receives the task, uploads all final client documents, and selects an available **Compliance Manager (CM)** from a list to assign the client.	Doc Upload, Master Data
7	**System**	Upon task completion, the client profile is fully activated. A welcome email with portal details is sent to the client, and a notification is sent to the assigned CM.	Auto Comm

Potential Bottlenecks & Dependencies:

- **Process Bottleneck:** The manual payment confirmation by the **Finance Team** (Step 4) is the biggest chokepoint. Any delay here halts the entire onboarding process.
- **Resource Bottleneck:** The availability of a **Compliance Manager** for assignment (Step 6). A high volume of new clients could lead to delays if all CMs are at capacity, impacting the client's first impression.
- **Information Dependency:** The quality of the handover depends on the diligence of the **Sales Team** in uploading all necessary documents. Missing documents can create immediate work for the new CM.

2. Core Service Delivery & Filing Lifecycle (Manual Task Creation)

This is the central operational flow, now updated with the manual task creation logic. The CM acts as the control tower for all service delivery.

Detailed Step-by-Step Description:

Step	User Action	Description	Primary Modules
1	**Compliance Manager**	Reviews the client's service agreement and manually creates a new task (e.g., "File ITR for AY 2025-26").	Workflow/Task
2	**Compliance Manager**	Assigns the task to the appropriate operational team (e.g., **Taxation Team**) and sets the priority.	Workflow/Task
3	**System**	The task is created. It automatically populates the due date in the client's compliance calendar and appears on the Taxation Team's dashboard.	Dashboard
4	**System**	If documents are required, an automated notification is sent to the **Client**.	Auto Comm
5	**Client**	Uploads the requested documents via the portal.	Doc Upload

6	**Operation Team**	Works on the task, updating its status (e.g., "In Progress," "Review Pending"). The CM can monitor this status in real-time.	Workflow/Task, Dashboard
7	**Operation Team**	Completes the filing, uploads the acknowledgment, and marks the task "Completed."	Doc Upload, Workflow/Task
8	**System**	The "Completed" status triggers a final confirmation email to the **Client**, with the **CM** automatically included in the CC.	Auto Comm

Potential Bottlenecks & Dependencies:

- **Single Point of Failure:** The **Compliance Manager** is the sole initiator of all work. If a CM is on leave, overloaded, or makes an error, service delivery for their clients will be delayed or missed. This is the most significant risk in this workflow.
- **Scalability Issue:** This manual creation process will become a major bottleneck as the client base grows. The CM's workload will increase linearly with the number of clients and services, making it difficult to scale.
- **Communication Bottleneck:** If the operational team requires clarification, they must go through the CM, who then contacts the client. This indirect communication can slow down resolution.

3. Grievance, Escalation & Oversight Flow

This flow ensures that there are clear channels for support, executive oversight, and handling exceptional circumstances like an unavailable manager.

Detailed Step-by-Step Description:

Step	User Action	Description	Primary Modules
1	**Client**	Experiences an issue and contacts their **Compliance Manager (CM)** via email or phone.	N/A
2	**Compliance Manager**	Creates a "Grievance Ticket" (a task type) in the system, detailing the client's issue.	Workflow/Task

3	**Compliance Manager**	Assigns the ticket to the relevant operational team for resolution. The ticket's SLA timer begins.	Workflow/Task
4	**Operational Team**	Investigates and resolves the issue, adding internal notes. They mark the ticket "Resolved."	Workflow/Task
5	**System**	A notification is automatically sent to the **Client** and **CM** confirming the resolution.	Auto Comm
6	**Executive (Oversight)**	Reviews their dashboard and identifies a negative trend (e.g., high number of grievance tickets for a specific service).	Dashboard
7	**Executive**	Raises a high-priority "Investigation Task" and assigns it to the responsible **CM** to find the root cause.	Workflow/Task
8	**System Admin (Escalation)**	In a scenario where a CM is unresponsive, a client or internal user escalates an issue. This routes the ticket to the **System Admin**, who reassigns it to an available CM.	Workflow/Task

Potential Bottlenecks & Dependencies:

- **Single Point of Failure (Support):** As with service delivery, the CM is the single entry point for all support queries. This makes them a bottleneck and creates a risk if they are unavailable.
- **Response Time Dependency:** The effectiveness of the escalation path (Step 8) is entirely dependent on the **System Admin's** availability and defined response time.
- **Investigation Overhead:** The Executive oversight process (Steps 6-7) is streamlined but adds to the CM's workload, as they must investigate systemic issues in addition to managing client relationships and creating tasks.

Detailed User Stories by Module

Module 1- Document Upload Module

- **As a Client, They want to:**
  - upload a single document to a specific folder (e.g., GST Returns), so that I can provide the necessary files for a filing.
  - select and upload multiple documents at once, so that I can save time when providing a batch of files.
  - view a list of all my uploaded documents with clear labels and dates, so that I can have a secure digital record of my filings.
  - download any document I have previously uploaded or that the team has shared with me, so that I can access my records 24/7.
- **As a Sales & Onboarding Team member, They want to:**
  - upload the signed client contract and onboarding forms to the new client's profile, so that I can create a complete record for the handover to the Compliance Manager.
- **As a Compliance Manager, They want to:**
  - review documents uploaded by a client, so that I can verify their completeness and accuracy before starting a task.
  - upload a document on behalf of a client who has sent it via email, so that the central repository remains up-to-date.
- **As a Compliance Operation team member,They want to:**
  - upload the final filed return and the government acknowledgment (challan/SRN), so that I can mark a task as complete and provide proof of filing.

Module 2- Master Data Management Module

- **As a Sales & Onboarding Team member, They want to:**
  - create a new client profile with their name, business details, and contact information, so that they can initiate the onboarding process.
- **As a Compliance Manager, They want to:**
  - view the complete master profile of my assigned clients, including all their compliance numbers (PAN, GSTIN, CIN), so that they have all necessary information in one place.
  - edit a client's profile to add or update key contacts and DSC (Digital Signature Certificate) expiry dates, so that they can maintain accurate and current records.
- **As a System Admin, They want to:**
  - manage the master list of services offered by the company, so that they can be correctly assigned to clients.
  - define and update the compliance checklists and rules for different company types (Pvt Ltd, LLP, etc.), so that the system's logic remains current with regulations.

Module 3- Finance Module

- **As a Finance & Renewal Team member,They want to:**
  - create a new invoice for a service rendered to a client, so that I can bill them accurately.
  - view a dashboard of all outstanding invoices sorted by age, so that I can prioritize follow-ups.
  - mark an invoice as "Partially Paid" or "Fully Paid" upon receiving payment, so that I can keep the financial records accurate and unlock gated workflows.
- **As a Client, They want to:**
  - view a history of all my past and present invoices, so that I have a clear record of my expenses.

    - download a PDF copy of any invoice, so that I can use it for my own accounting purposes.
- **As a Sales & Onboarding Team member, They want to:**
    - view the payment status of the initial onboarding invoice, so that I know when I can proceed with assigning the Compliance Manager.

Module 4- Auto communication Module (Triggered based)

- **As a Compliance Manager, They want to:**
    - send a message to a client using a pre-defined template, so that I can communicate quickly and consistently.
    - view a chronological log of all automated and manual communications sent to a client, so that I have a complete history of our interactions.
- **As a Finance & Renewal Team member, They want to:**
    - trigger an automated payment reminder for an overdue invoice, so that I can improve the collection process.
- **As a System Admin, They want to:**
    - create and edit the templates for all automated communications (e.g., welcome email, deadline reminders, invoice alerts), so that I can control the company's messaging.
- **This module will be accessed by all the operation teams as well as the sales team for automated communication.**

Module 5- Auto Data Fetch and Fill Module.

- **As a Sales & Onboarding Team member,They want to:**
    - have the system automatically populate a client's name and contact details into a proposal template, so that I can generate proposals faster and with fewer errors.
- **This would also be used by the compliance operation team to fill the templates based on clients requirements.**

Module 6- Template based Document Generation Module

- **As a Sales & Onboarding Team member, They want to:**
    - generate a standardized proposal PDF from a template by selecting a client, so that I can send professional documents quickly.
- **As a Compliance Operation team member, They want to:**
    - generate a Board Resolution or a Share Certificate from a template for a specific client, so that I can fulfill compliance requirements efficiently.
- **As an Audit Team member, They want to:**
    - generate a Net Worth Certificate using client data already in the system, so that I can provide certified documents without manual calculation.
- **As a System Admin, They want to:**
    - upload, manage, and version-control all the master document templates (e.g., .docx files), so that all generated documents are based on the latest approved format.

Module 7- Dashboard Module

- **As a Client, They want to:**
    - see my compliance calendar with color-coded dates (Red, Amber, Green), so that I can immediately understand my upcoming deadlines and obligations.
    - view a list of all my active services with their current status (e.g., "Documents Received," "Processing," "Filed"), so that I have real-time visibility without needing to call or email.
- **As a Sales & Onboarding Team member, They want to:**
    - view my sales pipeline in a Kanban board format (New, Contacted, Proposal, Won), so that I can visually track and manage my leads.
- **As a Compliance Manager, They want to:**
    - view a unified dashboard showing the status of all filings for all my assigned clients, so that I can proactively manage my portfolio and prevent delays.
- **As a Taxation Team member, They want to:**
    - see a personalized queue of all tax-related tasks assigned to me, sorted by the nearest due date, so that I can prioritize my work effectively.
- **As an Executive, They want to:**
    - view high-level KPIs on the main dashboard, such as Monthly Recurring Revenue (MRR), Client Churn Rate, and Overall Filing Compliance %, so that I can monitor the health of the business.

Module 8- Workflow and Task Management Module

- **As a Compliance Manager, They want to:**
    - manually create a task for a specific client service (e.g., "File AOC-4"), so that I can initiate the operational workflow.
    - assign the created task to the correct operational team (e.g., Compliance Operation), so that the work is routed to the right people.
    - create a "Grievance Ticket" for a client query and assign it to a department, so that I can formally track the resolution process.
- **As a Compliance Operation team member, They want to:**
    - view a list of all tasks assigned to me in my personal queue, so that I know what I need to work on.
    - update the status of a task from "Pending" to "In Progress" to "Completed", so that the system reflects the real-time status of my work.

Module 9- Knowledge Base and AI Module

- **As a Compliance Manager, They want to:**
    - search an internal knowledge base for Standard Operating Procedures (SOPs), so that I can quickly find answers to complex compliance questions.
- **As a Client, They want to:**
    - access a self-service FAQ section on the portal, so that I can resolve common queries instantly without needing to contact support.
- **As a System Admin, They want to:**
    - create, edit, and categorize articles in the knowledge base, so that I can maintain a repository of helpful and accurate information.

Module 10- Security Management Module

- **As a System Admin, They want to:**
    - create a new user account and assign a pre-defined role (e.g., "Taxation Team"), so that new employees can access the system securely.
    - define and modify the permissions for each user role, so that I can enforce the principle of least privilege across the application.
    - view a detailed audit log of user activities, so that I can investigate any security incidents.
- **As a Compliance Manager, They want to:**
    - trigger a password reset for a client who is locked out of their portal, so that I can provide immediate assistance.

Module 11- External System Integration Module(Phase 1)

- **As a System Admin, They want to:**
    - configure the API connection to our company website's contact form, so that all new leads are automatically captured in the Filing Buddy sales pipeline.
